

Amplify Indoor C-Band Coverage.

The C-Band cellular signal repeater ready to enable business critical applications is available for testing and pre-order.

ENTERPRISE 1337R

AVAILABLE Q2 2022

ENGINEERED FOR **verizon**

The Enterprise 1337R is designed to improve Verizon network connectivity in any business.

- Amplifies 3.70 - 3.76 GHz
- Up to 90dB gain
- Offers a reliable fixed wireless solution
- Professional installation is available

Time Division Duplexing

With automatic TDD synchronization with Verizon's cellular network, it instantly amplifies C-Band and requires no additional backhaul.

Dual Pathways

The flexible signal repeater allows for a customizable set up using either a 2x2 MIMO or split mode.

Software Defined Filtering

Ensure only Verizon coverage is amplified throughout the building with preloaded SDF-V that targets 3.70 - 3.76 GHz.

Remote Monitoring & Management

Receive system alerts, see performance reports, and optimize performance from any cellular-connected device.
