

In-Building Wireless Solution Guide

PANDUIT®
infrastructure for a connected world

Wireless connectivity continues to make meaningful penetration into enterprise networks unlocking performance and transforming the way people work.

Partner with Panduit for best-in-class solutions throughout your enterprise environments that scale around the globe.

Panduit In-Building Wireless solutions supports your business, so you can effectively and efficiently support your customers.

A culture of curiosity, a history of innovation

From the first product, a panel conduit that gave us our name, we understood the value of thinking differently. Here's where it's gotten us:

Secure Data

Technology is a critical asset for driving improvements in operational and financial efficiencies, but it can become risky. Within Enterprise, data center, and industrial automation applications, broader access to networks, files, and websites increases threats, posing more significant security risks. Security considerations, while paramount, should not become a barrier to service improvements and IT investments. Panduit is a world-class developer and provider of leading-edge solutions that help optimize the physical infrastructure to mitigate risk and offers Network Infrastructure Security Solutions that enhance information security measures at the physical layer by deterring unauthorized network access and physical system changes.

Reliable Connection

Convergence, building automation, and proliferating connected devices are shaping enterprise environments, placing new demands on networks and staff. From the data center to telecom rooms and office environments, highly engineered, end-to-end cabling infrastructure and connectivity solutions help move business forward. Panduit offers a range of innovative copper cabling solutions to fit the needs of all types of applications for maximum performance.

Global Reach

Panduit operates globally and executes locally. Our global presence, backed by the Panduit ONE Partner Program, ensures continuity of supply on a global scale. Our extensive manufacturing capabilities are distributed across nine different locations. In addition to our extensive partner and distributor community, we have ten warehouses to help facilitate and augment the fulfillment operations of our distribution partners.

Scalable Infrastructure

Panduit works with 90% of Fortune 100 companies and supports all types of enterprises, commercial real estate properties, stadiums, outdoor venues, airports, healthcare facilities, education facilities, warehouses, and more. Our network infrastructure solutions enable wireless access, data security, access control, automation equipment, point-of-sale systems, client connectivity systems, and smart building technologies.

Innovative Solutions

At Panduit, innovation is in our DNA. We have a rich history of technical advances realized through our engineering expertise, along with our deep understanding of market needs and challenges developed through ongoing customer engagement and collaboration. Panduit infrastructure solutions are standards-based and backed by industry-leading warranties to ensure reliability and dependability.

World Class Global Manufacturing and Distribution Ecosystem

The Panduit global support structure for manufacturing, warehousing, sales, technical, and customer service enables real-time responses within each region.

A World of Connections

When it's your vision to connect technology, systems, and people on a global scale, you don't go it alone. That's why we built a support team that is committed to earning your trust and providing a superior customer experience the world over, and a partner ecosystem that spans the project lifecycle, from planning and design to delivery, deployment, maintenance, and operation.

Partner Smarter

Our global network of distributors provides local inventory, product support, and logistics services so our customers can expect to receive exactly what they need when they need it.

Our Panduit One partners include highly skilled installers, contractors, and system integrators who are trained and certified to design, develop, and deploy high-performance electrical and network infrastructures.

Optimize connectivity with a single source provider of all network infrastructure solutions needs in enterprise landscapes. Power distribution, cable and rack management, copper and fiber cable and connectivity systems, and grounding and bonding solutions that protect your critical connections.

Solutions

DAS | Small Cell | D-RAN | Wi-Fi

Room/Zone

Panduit leads the industry with innovative fiber-optic solutions that meet many network requirements and provide a migration path for applications. PanMPO™ Fiber Connectors and the HD Flex™ Fiber Cabling System simplify data migration. Get ahead of outages with identification tools with automated labeling, printers, and *RapidID™* Software Applications.

Equipment Room

Rapidly deploy Ethernet/IP networks efficiently with small cabinet and zone enclosures. Rugged, reliable infrastructure in equipment rooms house and supports the technology that makes the campus hum. Panduit Copper Systems provide the infrastructure to connect networking applications in any enterprise setting. Our industry-leading Category 6A Vari-MaTriX™ HD Cabling System delivers 10G and takes the guesswork out of applications like Power over Ethernet and HDBaseT.

Headend Room

Accelerate deployment and ensure network availability and performance through strong, capable, and versatile Racks and Cable Managers. Deploy power safely and monitor performance for electrical circuit overloads and critical IT equipment risks with Panduit Power Solutions including PDU, UPS, and FMPS. Comprehensive fiber optic connectivity supports advanced bandwidth and mission-critical infrastructures that deliver high performance, reliability, and scalability.

Power Distribution Systems

Panduit Fault Managed Power System

Higher Power. Longer Distance. Superior Safety.

Overview

The Panduit Fault Managed Power System (FMPS) is a novel remote power delivery system that allows System Integrators to safely and easily deliver power to wireless systems. The Panduit FMPS is the first in the market to comply with the new UL 1400-1 Standard for a safer, more reliable, and easy-to-install power alternative for wireless systems and eliminates many complicated requirements for traditional power. It delivers significant power over longer distances using standard multi-conductor cables without the need for conduit, junction boxes, breaker panels, or permits. Such innovations simplify installation, and increase deployment speed while reducing deployment costs. This is ideal for larger venues or complex installations that require centralized power management.

The Panduit FMPS offers remote monitoring and control capabilities that provide total visibility into power usage to manage and troubleshoot remotely. The plug-and-play configuration is flexible and scalable allowing for growth with increasing wireless demands while a hot-swappable configuration minimizes equipment downtime and business interruptions.

The Panduit Fault Managed Power System is a safe, efficient, reliable, and practical remote power delivery system that will go the distance.

Redundant fault management for ultimate safety making it safe to handle like Class 2 power

Substantially more power over long distances using less copper

Hot-Swappable configuration for ultimate flexibility and upgradability

Simple to install, startup, and troubleshoot

Endless remote monitoring and control capabilities

Novel remote power delivery system

The first in the market to comply with new UL 1400-1 Standard

Powers in-building wireless systems and more

How does the Panduit FMPS Work?

The Panduit FMPS uses Pulse Current as its power delivery method. The Transmitter converts standard AC power into high voltage DC power, which is further converted into a Pulse Current waveform delivered over a Class 4 multi-conductor copper cable to the Receiver. The Receiver converts the pulse current waveform into +/- 48 VDC power, which can power multiple end devices. With the ability to monitor faults, the system can safely use higher voltage to deliver power compared to low-voltage systems (Class 2). This allows the FMPS system to have all the safety benefits of low-voltage installations while delivering significantly more power over longer distances than Class 2 systems.

Where is the Panduit FMPS Used?

The Panduit Fault Managed Power System provides safe, sustainable, and reliable power distribution anywhere you need it. The Panduit FMPS serves as a backbone for power distribution deployment for any venue or technology. Centralized for ease of back-up, monitoring and control for added resiliency, and scalable to grow with your technological demands.

Panduit FMPS with In-Building Wireless

Wireless connectivity continues to make meaningful penetration into enterprise networks unlocking performance and transforming the way people work. Reliable connections, secure access to data, and on-demand communication capacity are mainstays of modern business. These resources are the fourth-utility that people rely on to get through their day. Partner with Panduit for best-in-class solutions throughout your enterprise environments that scale around the globe and optimize connectivity with a single source provider of all network and physical infrastructure solutions. In any Distributed Antenna System (DAS), Distributed-Ran (D-RAN), or small cell architecture, the Panduit FMPS provides safe power anywhere it is needed to power remote radios. Run fiber and copper in the same pathways for a faster installation and centralize power distribution with the Panduit FMPS for easy power back-up, monitoring, and control in a more reliable wireless network.

Uninterruptible Power Supply

Highly Efficient and Reliable Power Production and Backup

The Uninterruptible Power Supply (UPS) delivers highly efficient and reliable power protection and backup power for your Computer IT equipment. To continually meet the growing power demands of Data Center, Enterprise and Edge IT equipment, the UPS provides:

- Excellent electrical performance
- Secure network functions
- Intelligent battery management
- A long lifespan for lithium units
- Enhanced intelligent monitoring

The also comply with ENERGY STAR® 2.0, EMC and safety standards and has been integrated with DCIM Cloud-based Software. Integrated Wi-Fi provides wireless network connectivity as well as direct connectivity for quick and easy configuration. The Panduit factory warranty for VRLA (Lead-Acid) UPS is three years for the UPS unit and two years for the battery. The factory warranty for the Lithium-Ion UPS is five years for the UPS unit and battery.

G5 Intelligent PDUs

High Density. Different Configurations. Real-Time Monitoring.

The G5 iPDUs monitor the data center power and the environment by continuously scanning for electrical circuit overloads and physical environmental conditions that place critical IT equipment at risk. By monitoring physical access points, the PDUs increase cabinet security to protect your systems and data. With some of the highest outlet densities and the smallest form factors available in the market, your cabinets will be functioning at their most resourceful state.

Data Center Infrastructure Management for the Hybrid IT

DCIM Cloud-based Software is our next generation DCIM solution. A true cloud-native platform, built from the ground up to take advantage of cloud flexibility and scalability as well as enhanced manageability, security, and operations ease of use and efficiency to manage Data Center, Enterprise, and Edge infrastructures. Supports the management, monitoring, and alerting for power, cooling, environmental, IT, and connectivity.

Although DCIM Cloud-based Software is agnostic and supports multiple vendor IT and facilities devices, it tightly aligns with **G5 Intelligent PDU** and **UPS** product lines, to visualize rack-level

power, environment, and cabinet physical security access, enabling a single pane of glass to manage the entire data center infrastructure resources. In addition to floorplan layout and rack elevation, power path visualization enables operators to identify a single point of failure, reduce overprovisioning, and assess risk.

DCIM Cloud-based Software is a self-served solution which eliminates the need for professional services and with our open REST APIs that have all product functionality documented, customers can easily integrate with existing applications such as CMDB, ITSM, BMS, and ticketing system. This ensures a solution that is quick to deploy, intuitive to use, and simple to maintain.

Racks and Cable Management

Our comprehensive offerings of cabinets, thermal management, racks, enclosures for data centers, telecommunications equipment rooms, and enterprise cabling applications help to reduce energy consumption, enhance network reliability, and optimize space.

4-Post Cable Management Rack System

- Independent adjustable front and rear mounting rails can be adjusted while the rack is secured to the floor
- Printed rack space identification on all equipment rails allows for quick location of rack spaces (shipped numbers up per TIA606 specifications; can be set to number down by flipping the rails)
- Multiple mounting holes in top flanges for securing overhead pathways
- Weld nut construction eliminates the need for a second wrench increasing speed and ease of assembly
- Vertical cable managers mount directly to the 4-Post Rack at any of the four corners
- Paint piercing washers included to electrically bond rack for simplified grounding

Part Number	Height in. (mm)	Width in. (mm)	Depth in. (mm)	No. of Rack Units	Equipment Rails	Load Capacity lbs.	Color

R4PCN

Adjustable Depth 4-Post Racks

- Supports equipment mounting depths from 23 inches to 42 inches in 0.5 inch increments
- Constructed from heavy-duty steel which provides a sturdy and durable platform for equipment
- Compatible with accessories including: power distribution, unit brackets, vertical tie-off panels, and shelving
- Includes grounding and bonding features that prevent damage from electrical surges and ensure equipment operates reliably

Part Number	Height in. (mm)	Width in. (mm)	Depth in. (mm)	No. of Rack Units	Equipment Rails	Color

To learn more about 4-Post Racks, visit www.panduit.com/4-post-rack

2-Post Cable Management Rack System

- Printed rack space identification on all equipment rails allows for quick location of rack spaces; numbers up per TIA606 specifications
- Double-sided #12–24 EIA universal mounting hole spacing
- 24 #12–24 mounting screws included
- When mounting NetRunner Managers to channel rack R2P6S, utilize side mount kit WMPVSMK
- Multiple mounting hole locations in each base angle
- Can be used with all cable management and patch panel products in addition to any industry standard 19" components
- Paint piercing washers included to electrically bond rack for simplified grounding; for the complete grounding solution, use StructuredGround Kits for racks

Part Number	Height in. (mm)	Width in. (mm)	Depth in. (mm)	No. of Rack Units	Equipment Rails	Load Capacity lbs.	Color

PatchRunner™ 2 Vertical Cable Management System

- A "push-to-close" door design allows for easy operation
- The doors ship with managers which simplifies the ordering process with less packaging waste
- There are no brackets to install, providing faster installation while reducing labor costs
- Managers and doors are available in black and white
- Individual fingers align with rack spaces to simplify cable routing changes
- The integral bend radius control ensures network performance and system reliability
- An optional snap on vertical retainer can be placed on the fingers to help retain cables in channel for improved cable management and appearance
- An optional slack management spool helps organize and manage patch cord slack allowing for standardization of patch cord lengths

WMPF1E

NetManager™ High Capacity Horizontal Cable Managers

- Innovative inset fingers slope inward toward back of managers offering unobstructed access to network cabling for easier moves, adds, and changes
- Rear cable management finger spacing utilizes open D-rings for greater accessibility
- Can be used to create large capacity horizontal pathways for routing cable
- Patented front and rear dual hinged cover allows cable access without removing cover
- Pass-through holes allow for front to rear cabling
- Built in cable retainers hold cable in place for easy moves, adds, and changes
- Covers and #12–24 mounting screws included
- Recommended for use with NetRunner WMPVHC45E Vertical Manager or PatchRunner 2 Vertical Managers

PanZone® Wall Mount Cabinets

- Holds 12, 18, or 26 RU of active and passive network equipment plus two additional rack units for power strips and small electronic devices (modems, routers, power strips, etc.)
- Thermal management design (vents, perforated doors, and optional fan) optimizes air flow for improved heat dissipation
- Installed as hinged right or hinged left
- Conduit and wireless access point antenna knockouts provided
- Rear hinging access manages the back of the cabinet
- Accessories include horizontal slack manager, bend radius posts, rear equipment rail kit, and exhaust fan
- Working load rating of 250 lbs. (12 RU), 300 lbs. (18RU) or 350 lbs. (26RU)
- Adjustable rails mount at 1-inch increments to accommodate various depths of network equipment including PoE switches
- Individual rack spaces are identified for ease of equipment mounting
- Keys to secure front and rear doors and side panels

Part Number	Width in. (mm)	Depth in. (mm)	Height in. (mm)	No. of Rack Units	Material	Door Type	Color

PanZone® Consolidation Point Box Enclosures

- Provides a point of connection and configuration within the permanent link to allow interconnection and cross connection to a network service or device
- The use of these enclosures in a zone cable application provides accessibility and flexibility to reconfigure cable runs
- Meets frequently changing organizational requirements and reducing network downtime when reconfigurations happen
- 6 and 12-port boxes include base, cover, modular panels, Snap-In Mini-Com Faceplate, and external mounting brackets
- 24 and 48-port include base, cover, and external mounting brackets and provide versatility in configurations by accepting interchangeable modular patch panels for use with Mini-Com Products, NetKey Products, QuickNet Products, or fiber products
- Removable cover protects connection points
- Large openings for cable entry/exit allow for optimum cable capacity and maintains cable bend radius
- Foam around cable entry and exit points, protects from excess dust and debris

Adjustable Wall Mount Rack

- Wall mountable designed to support network equipment found in data center, telecommunication room, and lab environments
- Supports equipment mounting depths from 18 inches, 21.5 inches, and 25 inches to provide greater flexibility with a single part number
- Front weldments with adjustable front-to-back braces provide the required strength and flexibility needed to work with various types of active equipment
- Open design allows for maximum airflow in and around the rack
- Horizontal slots on the adjustable wall attachment brackets are compatible with Tak-Ty and allow for easy front to back cable management
- ETL approved, meets UL2416 with a tested load capacity of 150 lbs. for the 9 and 12 RU, 200 lbs. for the 18 RU

Universal Distribution Frames

- Engineered to deploy and protect Industrial Ethernet DIN mount switches in industrial applications
- Pre-configured, wall mount design delivers up to 75% faster implementation
- Pre-engineered power infrastructure with redundant power supplies, optional UPS, wiring, labels, terminal blocks, and disconnects
- Defined cable routings incorporate best practices in connectivity, cable management, wiring and grounding
- Additional back-end space allows for 3X the cooling capacity over typical deployments
- Key-locking handle limits access to authorized personnel for a secure network
- Detailed installation guide provides easy instructions assuring consistency and saving time on the job-site
- UL Type 4/12 or 4X, UL 508A Listed, CE Approved, IP66 Rated

Opticom® QuickNet™ Rack Mount Fiber Cassette Enclosures

- Support up to 96 LC fiber connections per RU
- Mount to standard 19" rack rails
- Holds QuickNet Fiber Optic Cassettes for Opticom Fiber Adapter Panels
- Holds HD Flex Fiber Optic Cassettes with FLEX-OPTI-1RU Bracket Adapter
- Suitable for all pre-terminated, field-terminated, or field-splice applications
- Slide-out, tilt-down drawer provides full front access to all fibers and cables
- Integral bend radius control and cable management for fiber patch cords
- Innovative rear cable management for proper slacking/spooling
- Multiple cable entry locations

Part Number	Description	Cassette/FAP/FOSM Openings	Color**
BEST SELLER FCE1U** ●	Rack mount fiber enclosure 1 RU, with sliding/tilt drawers	4	Black (BL), White (WH)
FCE2U** ●	Rack mount fiber enclosure 2 RU, with sliding/tilt drawers	8

Opticom® QuickNet™ Rack Mount Fiber Enclosures

- Supports up to 96 LC fiber connections per rack unit
- Mount to standard 19" or 23" EIA rack or cabinet
- Holds QuickNet or Opticom Fiber Adapter Panels (FAPs)
- Holds HD Flex Fiber Optic Cassettes with FLEX-OPTI-1RU Bracket Adapter
- Front and rear access on all models via durable molded-hinge doors
- Integral bend radius control and cable management for fiber patch cords
- Multiple trunk cable entry locations
- Include fiber optic cable routing kit (grommets, cable ties, saddle clips, strain relief bracket, and ID/caution labels) for various cable management solutions
- Extends 4.9 inches from rack

Copper Systems

TX6A™ Category 6A Unshielded Copper Cable

- Cable designed with small diameter to improve cable fill and simplify upgrades from Category 6
- Lighter weight cables, smaller bend radius and increased flexibility ease installation
- Best-in-class alien crosstalk mitigation
- Vari-MaTriX HD Cables offer the best EMI immunity in a UTP cable
- Exceptional performance for PoE++ applications – LP rated

Vari-MaTriX High Density (HD) Category 6A Copper Cable

Copper Patch Cords

- Each patch cord is 100% performance tested to component limits
- Tangle-free latch on all plugs
- Supports IEEE 802.3af, 802.3at, and 802.3bt type 3 and 4 for PoE applications up to 100 W
- 28 AWG patch cords support up to 96m of channel length when using 6m of patch cord; De-rating factor: 1.9
- 26 AWG patch cords support full 100-meter channel length; De-rating factor: 1.5
- 24 AWG patch cords support full 100-meter channel length; De-rating factor: 1.2
- Pre-labeled with the RapidID™ Network Mapping System to enable faster tracing, placing, and network documentation
- Eco-friendly packing minimizes single-use plastics and eases cleanup on the job site

Unshielded Patch Cords

RapidID™ Network Mapping System

The *RapidID* Network Mapping System automates labor-intensive and error-prone cable documentation, resulting in a faster, easier way to place and trace cables and patch cords. It is a practical alternative to traditionally manual approaches that is ideally suited for building a new telecommunications room, locating installed cabling, or replacing a network switch.

Reduce the time and cost of patch cord documentation by up to 50%. With *RapidID*, the painstaking labeling process is already done. Now network engineers can easily, quickly, and accurately place and trace cables to focus on more strategic initiatives.

Minimize the risk of a network outage. Network documentation can drastically reduce downtime during an outage, but documenting physical infrastructure is extremely time-consuming and often overlooked or outdated. *RapidID* makes the documentation process less painful and reduces human error by eliminating the need for manual data entry.

RapidID: EASY AS 1, 2, 3...

- 1

INSTALL
Install Panduit Copper & Fiber Patch cables pre-labeled with unique *RapidID* barcode labels.
- 2

DOWNLOAD
Download the *RapidID* application to your device (Mobile, Tablet, or Windows® OS desktop).
- 3

SCAN
Scan barcodes using a Bluetooth-enabled handheld scanner to:
 - Quickly and accurately capture and document new cable installations without the need for manual data entry
 - Find cable endpoints without disconnecting or disrupting connections, reducing risk of causing a network outage
 - Easily verify and audit existing patch cord mapping against previously saved results

It is a practical alternative to traditional manual approaches that is ideally suited for data center audits, enterprise environments, and remote locations.
